

Bug #3 → Pagination Not Resetting After Search or Status Change.

* Where (in) App.js (Frontend)
↓
OnChange for searching and status dropdown dropdown

* How I found it

- I tested a application by first moving to a later page using Next button
- Then I searched or changed status and I found no task available at page 3 i.e. "No task found".
- I noticed that search was using the new query but the page state was still the old page no.

* Root cause

OnChange (setQuery), OnChange (setStatus)

This doesnot change the page back to 1 for change in search or status

Fix :- I reset the page to 1 directly inside the onChange handler.

for search : $\text{onChange} = \{ (value) \Rightarrow \{$
 $\text{setQuery}(value);$
 $\text{setPage}(1);$
 $\}$;

for status : $\text{onChange} = \{ (value) \Rightarrow \{$
 $\text{setStatus}(value);$
 $\text{setPage}(1);$
 $\}$;

Result :- - Move to page 2 or 3, and change the search, the application correctly returns to page 1 and display appropriate results.
